

Business Requirement Document (BRD)

Project Title

E-Commerce Order Management Database System

1. Business Objective

The objective of this project is to develop a centralized database system that supports all major business operations of an e-commerce company. The system should improve operational efficiency, reduce manual work, eliminate data redundancy, and provide accurate business information.

2. Business Goals

The proposed system aims to achieve the following goals:

- Improve customer experience.
 - Maintain accurate product and inventory records.
 - Process customer orders efficiently.
 - Secure payment information.
 - Track product shipments.
 - Store customer reviews.
 - Generate business reports for decision-making.
-

3. Business Requirements

The proposed system should satisfy the following business requirements:

- Customer registration and profile management.
 - Product category management.
 - Product information management.
 - Supplier information management.
 - Inventory tracking.
 - Customer order processing.
 - Payment management.
 - Shipment tracking.
 - Customer review management.
 - Business report generation.
-

4. Expected Benefits

The implementation of the database system provides several benefits:

- Centralized data storage.
 - Improved data consistency.
 - Reduced data redundancy.
 - Faster order processing.
 - Better inventory management.
 - Improved customer satisfaction.
 - Secure payment records.
 - Efficient shipment tracking.
 - Accurate business reporting.
-

5. Business Rules

The following business rules must be followed:

- Every customer must register before placing an order.
 - Every product belongs to one category.
 - Every order belongs to one customer.
 - Every payment is associated with one order.
 - Every shipment is linked to one order.
 - Customers can submit reviews only for products.
 - Stock quantity should be updated after order confirmation.
 - Payment must be completed before shipment.
-

6. Success Criteria

The project will be considered successful if:

- Customer data is stored accurately.
 - Products are managed efficiently.
 - Orders are processed without errors.
 - Payments are recorded successfully.
 - Shipments are tracked correctly.
 - Reviews are stored properly.
 - Reports provide accurate business information.
-

7. Conclusion

The Business Requirement Document defines the business expectations and objectives of the E-Commerce Order Management Database System. It serves as a guideline for database design and system development.
